

Auto Guide Awnings

One of the most popular types of exterior blinds are auto guide awnings, traditionally seen on windows – offering shade from the sun and a degree of privacy. Now available in a wide range of plain colours as well as the longstanding stripe.

You could opt for the traditional cotton/polyester canvas with green backing, or consider the new acrylic weaves that show colour on both sides. Auto guide awnings are also available in a range of sunscreen fabrics so you can protect your home and your family from the heat and glare of the sun without obscuring your views.

- Provides shade from sun-glare and heat and some privacy
- Available in sunscreen fabrics • Available in a wide range of solid colours and stripes

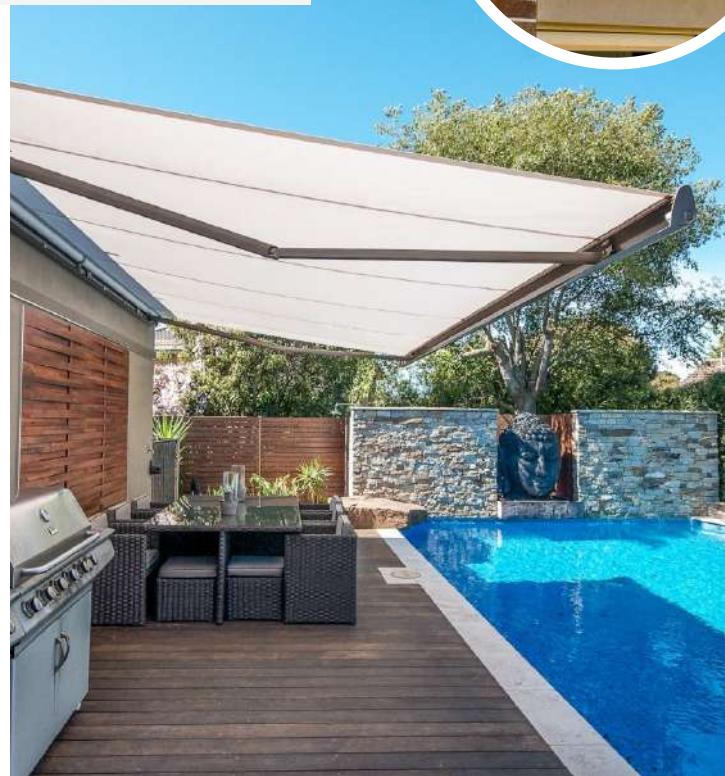

Folding Arm Awnings

Folding Arm Awnings are useful for outdoor areas of any size. They can fit any size of patio area and provide protection from the elements, shade from the sun and blend in with a range of home design.

Folding arm awnings are reactive – they can have a tilt mechanism which allows you to shade your area whenever you require, and a wind sensor that self retracts – meaning less work for you. You can manually control your folding arm awnings or motorise them.

Folding arm awnings operate best in moderate conditions so it's best to place them out of spots exposed to extreme wind or rain or add a wind & sun sensor.

- Provides protection from the elements
- Tilt mechanism • Can be motorised

Verandah Awnings

The automatic verandah awning is an effective solution on a moderate budget. If you're by the sea you can opt for stainless steel parts for extra protection and all hoods are available in powder coated colours.

Choosing between manual operation on a spring, crank handle or cord and pulley. You can add extra stopping heights to maximise the function of your verandah automatic awning.

- Provides privacy and shade from the elements
- Good solution for a moderate budget
- Stainless steel parts available • Powder coated colours
