## Mesh Options for Security Doors

### ALU-GARD

Alu-Gard utilises a strong (2mm thickness), non corrosive aluminium sheet that is perforated and powder coated to exacting standards. The sheet is retained in a frame with our riveted aluminium wedge retention system. The resulting screen is strong, extremely resistant to corrosion and provides clarity of vision.

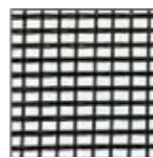

### RESTRICTED VISION MESH

Designed for strength and privacy, in the right light it enables you to see out without anyone being able to see in. Far stronger than fly wire, RVM is a great option for those seeking quality and security.

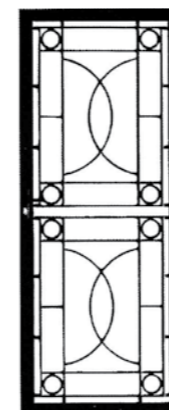

### STANDARD FIBREGLASS

Fly wire is a light weight mesh that keeps all insects out and has anti rot and anti corrosion properties, whilst having minimal restrictions to airflow.

### TUFF MESH

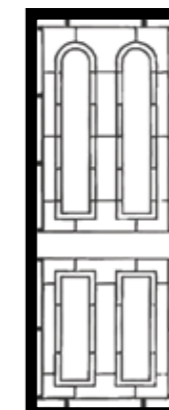

This Powder Coated aluminium mesh resists heat, tears and damages from people and pets. Tufflite Mesh is designed for bushfire prone areas and with its added strength increases the security of your home.
